Experience

- **Shopify** — Remote (Toronto, Canada)
  Senior Software Engineer — *March 2021 - Present*
  - Contributed to implementing local currency billing at Shopify and led the integration of the UPI payment method, enabling the collection of approximately $12M in pending bills from merchants in India.
  - Led the implementation of tax jurisdictions for Shopify's billing system, enabling accurate tax collection across multiple countries and saving the company approximately $5M in tax liabilities.
  - Led the migration of a 20+ TB archival database from MySQL to BigQuery, implementing a data replication layer which enabled ∼10x faster financial reconciliation analysis while eliminating MySQL maintenance costs.
  - Improved the logic for importing financial documents into Netsuite, increasing throughput by 1.5x and reducing timeout errors, thus enabling the Shopify finance team to expedite month-end closures.
  - Built production AI applications to help merchants understand how they can challenge disputes better and win more of them.
- **Hiver** — Bengaluru, India
  Senior Software Engineer — *May 2019 - Feb 2021*
  - Conceptualized and developed an internal Gmail emulator to test shared inbox logic, enabling comprehensive end-to-end integration testing which reduced production errors by nearly 50%.
  - Developed an internal tool to track email journey paths in shared inboxes, significantly reducing support and developer debugging time for issue identification.
- **Datalicious** — Bengaluru, India
  Full Stack Engineer — *June 2017 - April 2019*
  - Built a dashboard using React, D3, and Flask to enhance insights into customer journeys, including feature planning, story grooming, and task management.
  - Developed a service to aggregate data from ad-marketing platforms and export it to a data warehouse for streamlined post-processing.
  - Maintained a system for third-party tracking, analysis, and reporting of customer interactions.
- **Loktra** — Bengaluru, India
  Full Stack Engineer — *Dec 2016 - May 2017*
  - Led the implementation of a data pipeline to collect and clean coordinates, creating paths to visualize user journeys.
  - Created a horizontal scale database system to collect location coordinates from GPS devices.
- **AppPerfect** — Udaipur, India
  Software Engineer — *Feb 2016 - Nov 2016*
  - Responsible for developing and implementing new features for Load testing and Web testing tools.

Education

- **Geetanjali Institute of Technical Studies** — Udaipur, India
  Bachelor of Technology in Computer Science; CGPA: 8.4/10.0 — *2012 – 2016*

Skills

- **Languages**: : Python, Ruby, Scala, Typescript, SQL
- **Technologies**: : Flask, Django, React, Ruby on Rails, Docker, Git, GCP, AWS
- **Data**: : MySQL, PostgreSQL, Google BigQuery
